Abstract.

Scientific writing is an essential ability required for a scientist. Writing a paper is most effective after research is almost completed. If a conclusion is clear, you can write your paper from a title to a conclusion. This writing strategy is called an 'ABC writing skill.' (A) After completing research, (B) based on well-organized figures and tables, (C) compose your manuscript from a title to a conclusion logically and sequentially. This ABC writing skill would be helpful when research results are well organized in figures and tables, and then a paper can be written quickly. In summary, after research is completed, based on well-organized figures and tables, compose your manuscript from a title to a conclusion.
